SUMMARY

Full-stack developer with 2+ years of industry experience shipping React/TypeScript frontends and Node.js backends across healthcare and energy domains, plus hands-on AI integration (RAG pipelines with LangChain and Pinecone, Claude API). Most recently sole developer on a Supabase-powered operations platform serving 8 organizational roles daily. MS in Computer Science from Indiana State University. 3 published PyPI packages.

SKILLS

Languages: JavaScript, TypeScript, Python, SQL, PowerShell, HTML, CSS

Frontend: React, Next.js, Vite, Tailwind CSS, shadcn/ui, D3.js, Mapbox GL

Backend: Node.js, Express.js, GraphQL, REST APIs, RabbitMQ

Databases: PostgreSQL, SQL Server, Oracle, Redis, Pinecone

Cloud & DevOps: Azure, AWS, Docker, GitHub Actions, CI/CD, Vercel, Supabase

AI & LLM: Anthropic Claude API, LangChain, OpenAI API, Vector Databases, Retrieval-Augmented Generation

Tools: Git, Postman, Jest, React Testing Library, Pytest

EXPERIENCE

Full-Stack Developer, AIDM — Software Consultancy | Remote Jul 2025 – Present

- Architected a healthcare data integration pipeline ingesting clinical data from Homecare Homebase (HCHB) EHR via SFTP log shipping into SQL Server 2022 on Azure, feeding a Next.js operational analytics dashboard.
- Built PowerShell automation chaining WinSCP SFTP download and SQL Server transaction log restore into an idempotent hourly SQL Agent job, with lock-file concurrency control, structured logging, and exit-code-driven email alerts.
- Built and shipped a full-stack operations platform (React 18, TypeScript, Vite, Tailwind, shadcn/ui, GraphQL) on Supabase (PostgreSQL, Auth, Storage, Edge Functions, RLS), deployed via GitHub Actions CI/CD across AWS and Vercel, consolidating HR/applicant tracking, hospice CRM, email campaigns, training/LMS, and e-commerce into one SPA used daily across 8 organizational roles over 10 months.
- Integrated Anthropic Claude via Supabase Edge Functions to automate resume screening with fit scoring and reasoning (PDF/DOCX parsing via mammoth and pdfjs-dist), generate one-click application and CRM-account summaries, and surface natural-language insights across a 24-chart analytics system with DB-level caching and per-user rate limiting.
- Designed a hospice CRM with account management, a stage-tracked opportunity pipeline, territory assignment, a FullCalendar visit planner, Leaflet map views with OSRM route optimization, and an Excel-to-Supabase census pipeline powering 7/14/30-day branch visit analytics.
- Developed an email campaign engine with dynamic CRM-driven templates, business-day scheduling, and Microsoft Graph API integration for organizational sending, plus transactional emails with delayed queues and reply tracking.
- Enforced multi-tenant RBAC across 8 roles via a centralized permission matrix, Supabase Row Level Security, JWT-verified Edge Function auth, and Azure AD SSO with identity linking.

Graduate Research & Teaching Assistant, Indiana State University | Terre Haute, IN Aug 2023 – May 2025

- Built internal web applications for Indiana State University (React, Node.js, PostgreSQL), including a course catalog portal, faculty directory, and student resource dashboard used by academic departments.
- Built a RAG-powered knowledge assistant (LangChain, OpenAI API, Pinecone) for university staff to query academic policies and HR procedures, with configurable semantic retrieval, chunk-overlap tuning, and vector indexing.
- Built and open-sourced WebWeaver, a Python crawling library, and used it to ingest 40,000+ university URLs into a curated knowledge base of ~8,000 documents powering the RAG assistant's semantic search.

Full-Stack Developer, Cognizant Technology Solutions | Hyderabad, India Jan 2022 – Jul 2023

- Developed React-based portal modules for Duke Energy's energy management platform, delivering real-time usage analytics, billing history, and outage status with interactive D3.js visualizations to residential and commercial customers.

- Built Node.js/Express REST APIs integrated with Oracle and SAP backends to surface smart meter telemetry data, achieving sub-200ms p95 latency through Redis caching and connection pooling.
- Built an internal outage reporting dashboard (React, PostgreSQL, Mapbox GL) aggregating grid sensor data to help operations teams identify fault zones and coordinate field crew dispatch.
- Optimized SQL queries on multi-million-row smart meter and billing tables, reducing average execution time by 30% through composite indexing, join restructuring, and eliminating N+1 patterns.
- Contributed to integrating grid event feeds into the customer notification system, building Node.js/RabbitMQ services that triggered real-time outage alerts via email and SMS.
- Wrote unit and integration tests (Jest, React Testing Library) achieving 85%+ code coverage across frontend and API layers.

EDUCATION

Master of Science in Computer Science Indiana State University, Terre Haute, IN GPA: 3.66	Aug 2023 – May 2025
Bachelor of Technology in Electronics & Communication Engineering Vel Tech University, Chennai, India GPA: 9.01/10	Jun 2018 – May 2022

PROJECTS & OPEN-SOURCE

GitBar — macOS Menubar Git Dashboard (PyPI)	Mar 2026
• Built and published an open-source macOS menubar app providing a unified Git dashboard aggregating PRs, issues, CI/CD status, and local repo health across GitHub, GitLab, and Bitbucket. Tech: Python, PyObjC, GitHub/GitLab REST APIs.	
GadgetBox — Cross-Platform Developer Utilities (PyPI)	Feb 2026
• Published a cross-platform system tray app bundling 12 developer utilities (JSON formatter, JWT decoder, UUID generator, Base64, hash, regex tester, etc.) with intelligent clipboard auto-detection. Tech: Python, pystray, tkinter.	
WebWeaver — Web Scraping & Crawling Library (PyPI)	Sep 2024
• Open-source Python library for configurable web crawling with URL validation, deduplication, robots.txt compliance, and recursive/breadth-first modes; powers the data ingestion layer behind the ISU RAG chatbot. Tech: Python, asyncio, aiohttp.
